WATER SAVING

Kerasan, attiva da molti anni nel settore degli idrosanitari, ha progettato per Aquatech una soluzione innovativa e capace di ridurre gli sprechi d'acqua: un sistema di scarico che permette di scegliere tra uno parziale con 3 litri d'acqua e uno totale con 4,5 litri. Ciò garantisce un risparmio idrico notevole ad ogni utilizzo. L'uso abbinato tra wc e cassetta di scarico è conforme ai requisiti richiesti per i vasi di classe 2 in base alla norma EN 997 (standard europeo per i wc). Rispetto ai sanitari classificati in classe 1, tale norma prevede che i wc siano caratterizzati da maggiori prestazioni e che non consumino più di 6 litri per lo scarico.

Kerasan, with its long-standing experience in the sanitary ware industry, has now created Aquatech: an innovative solution which is able to reduce water wastage thanks to its flush system which is available with either a partial cistern of 3 litres or a full 4,5 litre cistern. This guarantees a considerable saving of water at each use. The combined use by the WC and cistern complies with the requirements for class 2 WC pans based on European WC standard n° EN 997. Compared to the sanitary ware listed under class 1, said standard provides that the WC are more efficient and do not consume more than 6 litres per flush.

Die Firma Kerasan, die seit vielen Jahren im Sanitärbereich tätig ist, hat für Aquatech eine innovative Lösung zur Senkung des Wasserverbrauchs geplant: ein Spülsystem, das die Wahl zwischen einer Sparspülung mit 3 Litern und einer Vollspülung mit 4,5 Litern lässt. Dies garantiert eine erhebliche Wasserersparnis bei jeder Nutzung. Die kombinierte Verwendung von WC und Spülkasten entspricht den Anforderungen für WC-Becken der Klasse 2 gemäß der Norm EN 997 (europäischer Standard für WC-Becken und WC-Anlagen). Die Norm sieht vor, dass WCs der Klasse 2, im Vergleich zu denen der Klasse 1, höhere Leistungen aufweisen müssen und nicht mehr als 6 Liter Wasser pro Spülgang verbrauchen dürfen.

Kerasan, activa desde hace muchos años en el sector de los hidrosanitarios, ha proyectado para Aquatech una solución innovadora y capaz de reducir los derroches de energía de agua: un sistema de descarga que permite elegir entre uno parcial con 3 litros de agua y uno total con 4,5 litros. Esto garantiza un ahorro hídrico notable en cada uso. El uso combinado entre wc y cajón de descarga es conforme a los requisitos solicitados para los inodoros de clase 2 según la norma EN 997 (estándar europeo para los wc). Con respecto a los sanitarios en clase 1, dicha norma prevé que los wc se caractericen por mayores prestaciones y que no consumen más de 6 litros para la descarga.

Per i lavabi di design che non sono dotati del foro troppopieno è possibile installare un sifone a doppia camera, è efficiente, sicuro e può essere azionato con leva.

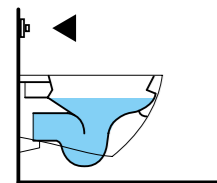

For wash basins without over flow it is possible to install a double chamber drain plug, it is efficient, safe and it works by an arm.

Für Designwaschbecken ohne Überlaufloch besteht die Möglichkeit, einen Doppelkammersiphon zu installieren: dieser ist effizient, sicher und kann mit einem Hebel betätigt werden.

Para los lavabos de diseño que no están dotados del desagüe es posible instalar un sifón de doble cámara, es eficiente, seguro y puede ser accionado con palanca.
